IN THE CLAIMS**1. (canceled)**

2. (currently amended) A hand-held terminal capable of making a plurality of kinds of communication, comprising:

a means for negotiating with a server and negotiation function unit for reserving a part of function of a multimedia communication apparatus for providing the reserved function to the hand-held terminal a certain kind of communication, the multimedia communication apparatus being equipped in and controlled by the server; and

a means for displaying available kinds of ~~the communication for which the hand-held terminal reserved the part of function from the multimedia communication apparatus for~~ which negotiation for reservation can be selected; and

means for conducting communications with another communication apparatus, wherein the communication with the other communication apparatus includes the reserved function of the multimedia communication apparatus.

3. (currently amended) A hand-held terminal capable of making a plurality of kinds of communication, comprising:

a means for negotiating with a server and reserving a ~~part of function of a multimedia communication apparatus for providing the reserved function to the hand-held terminal a certain kind of communication, the~~ server controlling one or more multimedia communication apparatus being equipped in and controlled by the server;

Serial No. 09/910,963

Page 3 of 12

a means for negotiating with ~~[[a]]~~ another communication terminal partner and conducting ~~the kind of a~~ communication with the other communication terminal partner the hand-held terminal using through the reserved ~~part of~~ function of the multimedia communication apparatus; and

a means for displaying available kinds of ~~[[the]]~~ communication with the other communication terminal, as notified from the other communication terminal partner.

4. (original) The hand-held terminal of claim 2, wherein said means for displaying displays a selectable condition, the reserved condition and a using condition of the multimedia communication.

5. (currently amended) The hand-held terminal of claim 2, further comprising:
a unit for storing information for cryptographic communication to encrypt communication between the hand-held terminal and the negotiation function unit server to an information storage medium.

6. (currently amended) The hand-held terminal of claim 2, further comprising:
a selector for selecting from among available ~~[[the]]~~ kinds of communication that can be used with the other communication apparatus partner and of which the ~~part of~~ function of the multimedia communication apparatus are reserved.

7. (canceled)

8. (currently amended) A hand-held terminal as set forth in claim 3, further comprising:

- a transmitting unit to transmit signals to the other partner communication terminal; and
- a controlling unit to control said transmitting unit to transmit information with respect to a class of multimedia communication being available for itself to the other partner communication terminal, wherein the class of multimedia communication available includes functions reserved through the server.

9. (currently amended) A hand-held terminal as set forth in claim 3, further comprising:

- a transmitting unit to transmit signals to the other partner communication terminal; and
- a controlling unit to control said transmitting unit to transmit information with respect to a class of multimedia communication, at the time of starting the communication, being available for its own terminal.

10. (currently amended) A hand-held terminal as set forth in claim 3, further comprising:

- a transmitting unit to transmit signals to the other partner communication terminal; and
- a controlling unit to control said transmitting unit to transmit information with respect to a class of multimedia communication, during the communication with the other partner communication terminal, being available for its own terminal.

11. (currently amended) A hand-held terminal as set forth in claim 3, further comprising:

- a transmitting unit to transmit signals to the other partner communication terminal; and

84145481_1

Serial No. 09/910,963

Page 5 of 12

a controlling unit to detect a change of a class of multimedia communication available for its own terminal during a communication with the other ~~partner~~ communication terminal and then control said transmitting unit to transmit information with respect to the change of the class of multimedia communication.

12. (currently amended) A hand-held terminal for conducting a multimedia communication between itself and a partner communication terminal, comprising:

a transmitting unit to transmit signals including information with respect to reserving a ~~part of~~ function of a multimedia communication apparatus for a class of multimedia communication services available to itself and to the partner communication terminal,

a receiving unit to receive signals including information with respect to a class of multimedia communication services available to the partner communication terminal from the partner communication terminal,

a means for negotiating with a negotiation function unit for reserving a function of a multimedia communication apparatus for providing the reserved function to the hand-held terminal.

a display unit, and

a controlling unit to control said display unit to display information of the class of multimedia communication services available for use between itself and the partner communication terminal using the information received by said receiving unit.

13. (currently amended) A hand-held terminal for conducting a multimedia communication between itself and a partner communication terminal, comprising:

84145491_1

Serial No. 09/910,963

Page 6 of 12

a communication unit to negotiate with at least one of a multimedia communication apparatus and a server controlling said multimedia communication apparatus for reservation of a ~~part of~~ function of said multimedia communication apparatus for use by said hand-held terminal, wherein said hand-held terminal utilizing said function of said multimedia communication apparatus may communicate in a [[for]] a class of multimedia communication available for communication with the partner communication terminal,

a display unit to display available kinds of communication with the partner communication terminal under the available class for which the hand-held terminal reserved the ~~part of~~ function from the multimedia communication apparatus,

a transmitting unit to transmit signals to the partner communication terminal, and

a controlling unit to detect a change of a class of multimedia communication available for own terminal through the negotiation and then control said transmitting unit to transmit signals including information with respect to the change of the class of multimedia communication.

14. (currently amended) As system providing multimedia communication for a hand-held terminal, comprising:

a server for managing a multimedia communication apparatus, and having a negotiation unit for negotiating with said hand-held terminal for reservation of a ~~part of~~ function of the multimedia communication apparatus for use by said hand-held terminal, wherein said hand-held terminal utilizing said function of said multimedia communication apparatus may communicate by a kind of communications with a communication partner, and for reserving the ~~part of~~ function for the hand-held terminal after negotiation,

Serial No. 09/910,963

Page 7 of 12

a controller in said hand-held terminal for negotiating with said server for reserving the ~~part of~~ function of said multimedia communication apparatus, and for conducting multimedia communication with the communication partner through a negotiation with the communication partner, and

a display in said hand-held terminal for displaying available kinds of communication for which the hand-held terminal may communicate with utilizing the reserved ~~the part of~~ function from the multimedia communication apparatus.

15. (currently amended) A mobile terminal for multimedia communication, comprising:
a mobile radio communication unit providing an interface to a mobile radio communication network,

a local radio communication unit for providing an interface to a local area radio communication network, and

a controller unit to control said mobile radio communication unit and to negotiate with a ~~communication an~~ apparatus for reserving a ~~part of~~ function of the ~~communication~~ apparatus for a kind of multimedia services for use by said mobile terminal, wherein said mobile terminal communicates through said mobile radio communication network with another communication apparatus utilizing said function of said apparatus, and

a display unit to display a status of the kind of multimedia services for which the mobile terminal reserved the ~~part of~~ function from the ~~communication~~ apparatus.

16. (original) The mobile terminal of claim 15, wherein said controller unit, further comprising:

84145-48i_1

Serial No. 09/910,963

Page 8 of 12

a profile information management unit for managing profile information of said mobile

terminal,

a remote controller control unit for controlling peripheral apparatus including said display unit, and

a local communication security unit for providing security features for said local radio communication unit when communicating with said local area radio communication network.
